PREFACE

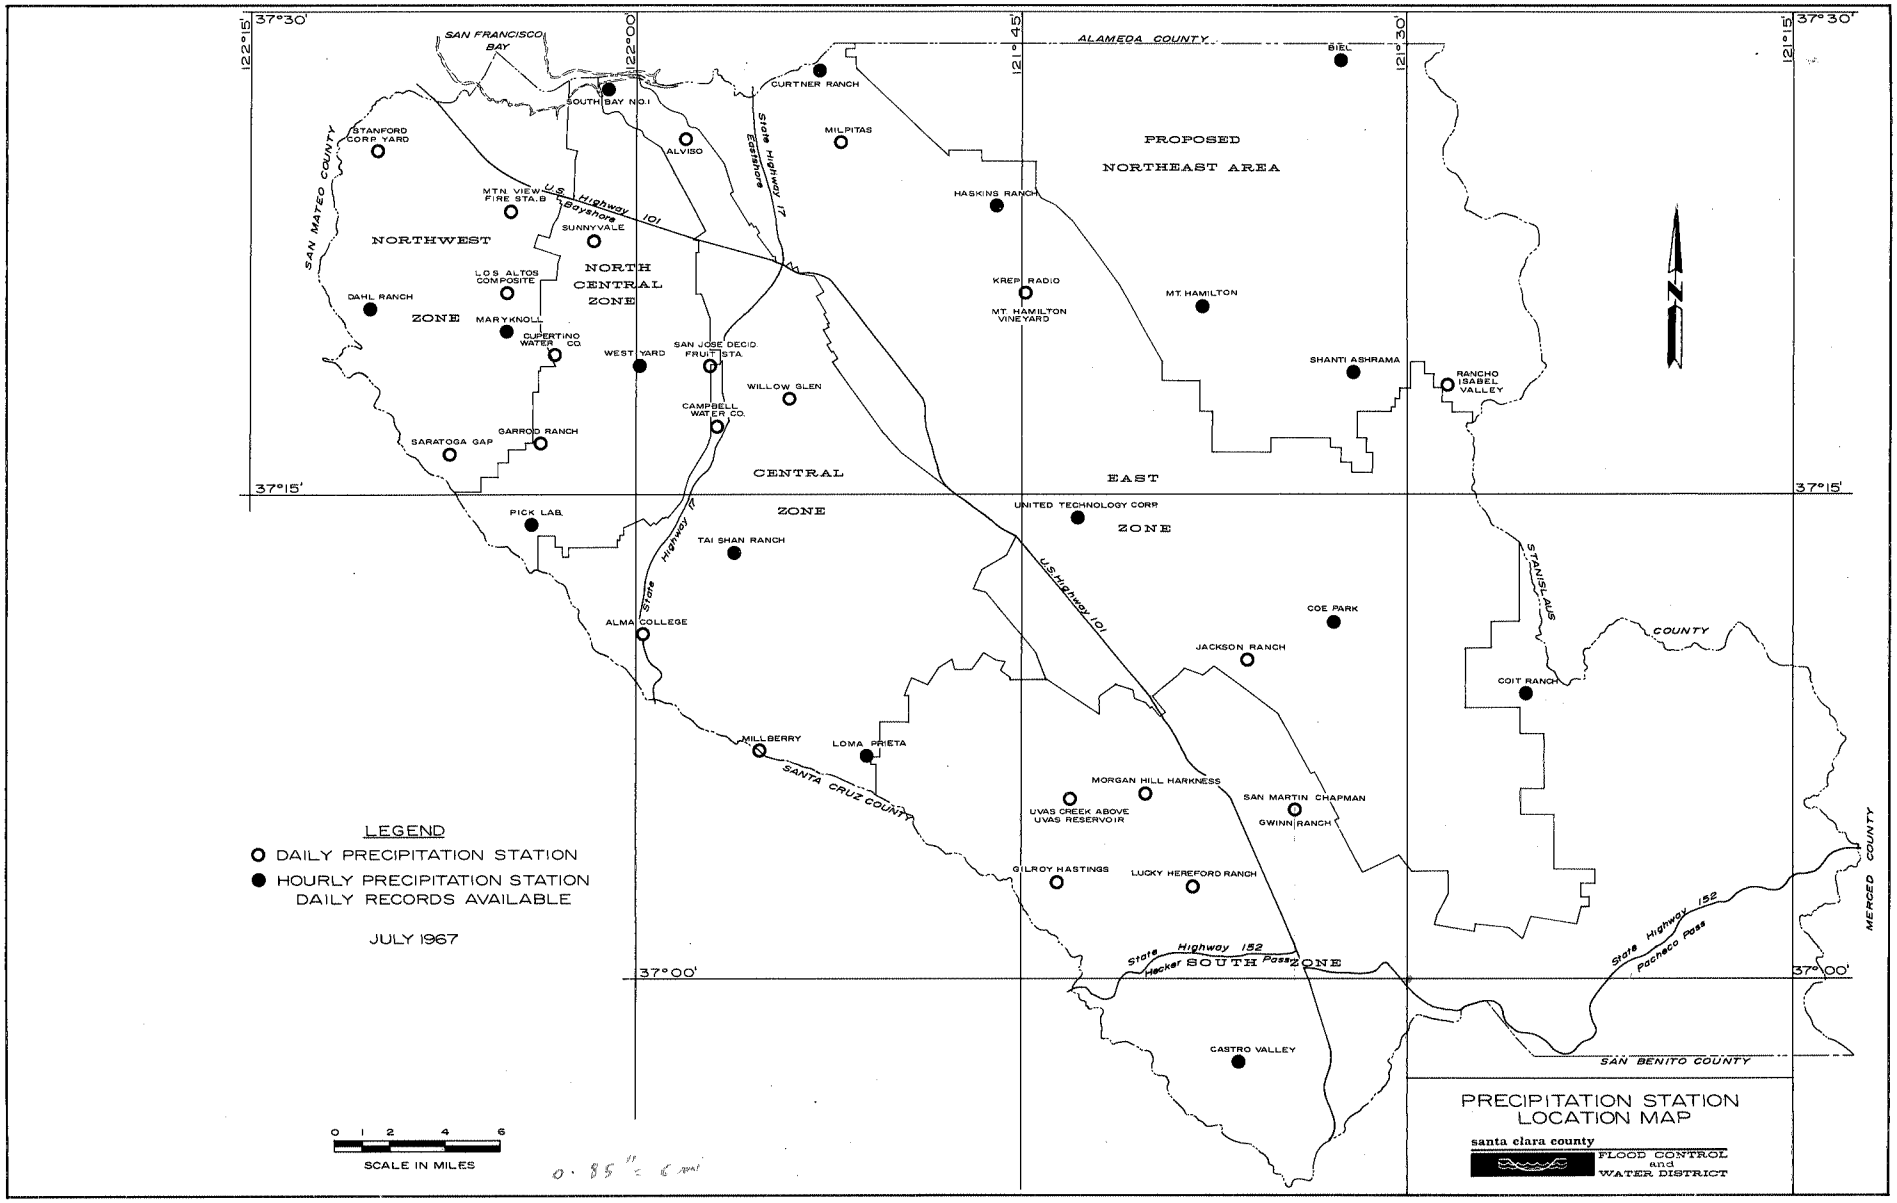

Precipitation data in Santa Clara County has been and is presently collected by many individuals and agencies. One objective of the District data collection program is to gather, evaluate, and make all reliable unpublished precipitation data readily available. This Daily Precipitation Data Report is one of two publications produced in an attempt to meet this objective. The other publication is the Hourly Precipitation Data Report.

This Daily Precipitation Data Report contains data from 38 stations with records ranging from one year to 49 years in extent over the period from 1916 to 1966. Criteria for selecting the records to be published included the fact that the data are presently unpublished, that the data are relatively reliable, and that the record is needed to help complete an adequate coverage of precipitation information for the County.

The Hourly Precipitation Data Report contains records for 16 stations, some dating back to 1955, and is supplemental to this report of Daily Precipitation data.

The District plans to publish additional volumes of each Report biannually in an attempt to provide somewhat current records. Unpublished records will be filed in the District office, and are available to interested parties or agencies.

The collection of these data are accomplished only through the cooperation of many individuals and agencies. Their cooperation is gratefully acknowledged.
